

A PROACTIVE
APPROACH

Utilities spend millions of dollars each year repairing damage caused by animals entering substations and making contact with electrical equipment. It is estimated that power outages due to animal contact cost the United States economy at least \$18 billion each year.

Power outages from animal contact can be experienced by thousands of customers - in some cases for extended periods of time.

VANQUISH's Animal Deterrent System (ANIMAL GUARD) creates an environment that is both secure for equipment and confusing to small crawling animals.

PATENTED Design prevents small crawling animals from:

- Passing through the fabric
- Digging under the fence line
- Blocks access at the corners
- Seals gate breach points
- The ability to gain a foot hold

While adding to the overall look of the substation.

Contact VANQUISH today.

Find out how the **VANQUISH ANIMAL GUARD** fence system can eliminate animal-caused outages in your substations.
